

Supplemental Data

Supplementary Table 1 Breast milk CMV gB-specific IgG titer determined by ELISA in 20 known seropositive and seronegative women. The titer given is the highest dilution for which the OD was greater than three times the background OD (lowest dilution = 1:3). The maternal serostatus was determined by CMV IgG ELISA (Trinity Biotech)

ID number	CMV serostatus	Breast milk CMV gB IgG titer
01-001	Positive	30
01-043	Negative	Negative
02-002	Positive	30
02-018	Positive	100
02-033	Negative	Negative
02-034	Negative	Negative
02-037	Negative	Negative
02-038	Negative	Negative
02-040	Negative	Negative
02-041	Positive	>3,000
02-042	Negative	Negative
03-013	Positive	100
03-027	Positive	300
03-029	Positive	300
03-031	Negative	Negative
03-032	Positive	300
03-035	Negative	Negative
03-036	Positive	300
03-039	Negative	Negative
03-044	Positive	100

Abbreviations: CMV, cytomegalovirus; ELISA, enzyme-linked immunosorbent assay; gB, glycoprotein B; IgG, immunoglobulin G; OD, optical density.
