Cascade Cyclization to Produce a Series of Fused, Aromatic Molecules
*Org. Lett. 2010, 12, 2146-2148.*

**Domino Aromatizing Cyclization**

**Significance:** Fused-ring monoaza-acenes where synthesized in high yield through a nucleophile-initiated cascade cyclization to generate fully aromatic products. The nucleophilic attack appears to be regioselective and all products were emissive.

**Comment:** All of the cyclized products form multi-point hydrogen-bonding interactions in the solid state.
