The structure of natural compound **1** isolated from *Isodon japonica* var. *glaucoalyx*, glaucocalyxin H, was assigned incorrectly and should be assigned as following **Fig. 1**.

In our published paper, the position of two hydroxyl groups in aromatic ring was elucidated as 3',5'-dihydroxy substitution by 1D and 2D NMR experiment. Recently, in our research project for the structural modification of the parent compound of **1**, glaucocalyxin A, we synthesized the compound **1** from glaucocalyxin A and 3,4-dihydroxybenzaldehyde (i.e. protocatechualdehyde). The result confirmed that the two hydroxyl groups of **1** should be located in C-3', C-4'.

Our Supporting Information was corrected accordingly.
