

Palladium-Catalyzed Asymmetric Decarboxylative Cycloaddition of Vinylethylene Carbonates with Electrophiles: Construction of Quaternary Stereocenters

Ajmal Khan

Yong Jian Zhang*

Synlett 2015, 26, 853.

Ligand **L3** in Scheme 7 was inadvertently displayed with the incorrect absolute configuration, as the *S* enantiomer. The correct picture with the *R*-configured ligand is shown below.

Therefore, the proposed stereochemical outcome (Figure 3 and the second sentence in the left column on page 858) is incorrect. The absolute configuration at C-4 of the cycloadducts **8** should be opposite to that of 1,3-dioxolanes **2** from vinyl-ethylene carbonates with formaldehyde. The true stereochemical outcome will be investigated in the near future. However, this does not affect any conclusions of this Synfacts article. The authors sincerely apologize for the mistake.
