Synfact
of the month

Significance: The authors present a reusable, bench-stable, silicon-based transfer agent for effective room-temperature palladium-catalyzed cross-couplings of aryl chlorides with aryl lithium reagents.

Synfacts 2016, 12(4), 0397 Published online: 15.03.2016

DOI: 10.1055/s-0035-1561806; **Reg-No.:** P02316SF

Comment: DFT calculations outline the importance of the CF₃ groups of the transfer agent and support a σ -bond-metathesis mechanism during transmetalation.
