Regio- and Diastereoselective Iron-Catalyzed [4+4]-Cycloaddition of 1,3-Dienes

J. Am. Chem. Soc. **2019**, *141*, 8557–8573.

Diastereoselective [4+4] Cycloadditions

Selected examples:

Selected examples:

Significance: Chirik and co-workers report a regio- and diastereoselective iron-catalyzed [4+4] cycloaddition of 1,3-dienes, leading to various substituted cyclooctadienes in excellent yields.

Comment: Remarkably, with the choice of the iron catalyst, the cyclodimerization can be controlled in a diastereoselective fashion. Extensive mechanistic studies were performed and catalytically relevant iron complexes were isolated and characterized.
